ASX / MEDIA RELEASE

4 DECEMBER 2009

REDBANK EXPANDS BOARD

High grade copper developer Redbank Copper Limited (ASX: RCP) is pleased to announce the appointment of Allan Brown as non-executive metallurgical director.

Mr Brown is a metallurgist with more than 40 years industry experience, specialising in the design, testing, commissioning and operation of base metal processing projects. He is also experienced in the marketing and transport of mineral concentrate.

He joins Redbank as the company moves forward with its high grade copper project in the Northern Territory, where it is targeting commencement of copper cathode production mid next year.

Redbank Chairman Dr James Searle said Mr Brown's appointment would complement the current Board team and add further technical depth.

"Allan joins the Board at a timely point in our development, and his expertise in developing and managing mineral processing operations will be of immediate value to shareholders as we move the Redbank copper project toward production," he said.

As an industry consultant, Mr Brown has worked on metal processing projects in Australia and overseas for a range of local and global organisations, including AngloGold, Newcrest and CBH Resources.

Prior to his consulting career, he worked as Project and Mine Manager for a number of gold and base metal developers, including Wiluna Gold, Sally Malay Nickel and Murchison Zinc.

About Redbank Copper

Redbank Copper is an Australian based ASX-listed resource company (ASX: RCP) focused on the development of the Redbank Copper Mine in the north east of the Northern Territory.

The project is located in the Redbank Mineral Field in the NT, where the Company holds a substantial ground position. The region hosts significant economic copper mineralisation and is highly prospective for copper, cobalt, phosphate, manganese and uranium.

The Company acquired the Redbank Copper Mine in 2005. The tenement package included an established resource base, numerous advanced copper targets and processing infrastructure. Redbank has an exploration program underway to expand its resource base, and is developing the project toward recommencement of production, in line with the Mine Study released in September 2009.

Redbank also has an exploration joint venture with Glencore International, one of the world's largest commodity suppliers. The Company has also signed an off-take agreement with Glencore for the life of mine, based on marked based spot prices of copper.
